

Information Quality - A Critical Success Factor

How to make it all right!

Anders Svensson (Sweden)

Key words: Access to land; Cadastre; Digital cadastre; History; Land management; Legislation; Real estate development; Information quality; Property information; Property boarders

SUMMARY

Sweden has a long tradition in registration of land from the 13th century until today. The information has been created in the Cadastral Register where the properties of Sweden are stored with many different methods in both the analogue as well as the digital era. Today, the use of information has changed from being a signal system towards decision-making systems. That requires greater demands on the information quality.

The Swedish approach to Property Information 2025, has an objective that information quality can meet the requirements from both the society in general, for the built environment as well as to secure the rights for property owners.
