Key words: Cadastre; Digital cadastre; 3D

SUMMARY

The 3rd FIG Questionnaire 3D-Cadastres was conducted by the end of 2018, with deadline 15 December 2015. The questionnaire is an activity of the FIG working group 3D-Cadastres 2018-2022. The purpose of the survey is to make a world-wide inventory of the status of 3D-Cadastres at this moment (2018) and the plans/expectations for the near future (2022). By sharing this information, it should be possible to improve cooperation, learn from each other and support future developments. As stated above, this is the third time that the questionnaire on 3D-Cadastres is conducted. The first time was in 2010 in order to document the status in 2010 and expectations back then for 2014. This was followed by second questionnaire in 2014 (with status 2014 and expectations 2018). The earlier responses have been analysed and reported on at earlier FIG events (WWs or workshops). The structure of the 3rd questionnaire has remained rather stable: same main sections and same numbering of the questions. This allows easy comparison to the earlier questionnaires in order to identify the trends. A few questions have been refined for clarification and a few new questions have been added. In this paper we will present the main results after analyzing the submitted 2018-2022 responses.
