

The Real Property Register allows you to reach the Sustainable Development Goals

Anders Svensson (Sweden)

Key words: Access to land; Cadastre; Cost management; Implementation of plans; Land management; Real estate development; Spatial planning; Valuation

SUMMARY

Sweden's Real Property Register stands for stable and secure ownership of land in Sweden and is a foundation of democracy. The register contains information of ownership of properties, joint property units, rights, joint facilities, addresses and buildings etc.

What can the Real Property Register contribute to achieving the sustainable development goals in 2030?

The register contributes to a greater or lesser extent to all UN development goals where its contribution for development within the country is big as well. In order for planning and make correct decisions, it's important to work with the quality of information so that it can meet the requirements of both society in general, for the smart built environment as well as to secure the rights for property owners.

To give some examples, a stable and well-developed country has great opportunities to fight poverty and provide clean water and sanitation for everyone, work for sustainable energy and fight the climate change. The sustainable goals is no obstacle to economic growth, an improved infrastructure and industry where innovations can be developed that increases the opportunities further.

Working for a sustainable society in accordance with the sustainable goals can affect how a country acts on different issues, but the demands that are made are not an obstacle to development.

We just need to think differently!

The Real Property Register allows you to reach the Sustainable Development Goals (10619)
