c. 540 AD Cassiodorus said:
“... the land surveyor is like a judge: the deserted fields become his forum, crowded with eager spectators. You would fancy him a madman when you see him walking along the most devious paths. But in truth he is seeking for the traces of lost facts in rough woods and thickets.

He walks not as other men walk.

His path is the book from which he reads;
he shows what he is saying;
he proves what he hath learned; by
his steps he divides the rights of
hostile claimants; and like a mighty
river he takes away the field of one
side to deposit them on the other.”

GEORGE WASHINGTON
"Father of Engineering Education"

Three Captains and nine Lieutenants are wanted to officer the Companies of Sappers: As this Corps will be a school of Engineering, it opens a Prospect to such Gentlemen as enter it and will pursue the necessary studies with diligence, of becoming Engineers and rising to the important Employments attached to that Profession, as the direction of fortified Places, & etc. The Qualifications required of the Candidates are that they be Natives and have a knowledge of the Mathematics and drawing, or at least be disposed to apply themselves to those studies. They will give in their names to Headquarters."

By Order of the Commanding General

George Washington

Although not started until West Point was activated in 1802, this order enabled the development of an Engineering technology that has made American Engineering the envy of the world.

of issue

Born a free man on a farm near the Potomac River in Baltimore County, Maryland, the first black man of science earned local recognition by solving the works of a striking clock from his own drawings. With the assistance of George Elliott, he taught himself mathematics and astronomy, publishing his first Almanac in 1792. His greatest adventure was in assisting Major Andrew Ellicott in surveying the boundaries of the new Federal City on the Potomac in 1791.

FIRST DAY OF ISSUE

Benjamin Banneker was born free in Maryland in 1731, as the son of a formerly enslaved Black man and a mixed-race mother. He taught himself mathematics, science, and literature from borrowed books. He read about planets and stars and observed them from his fields at night. His strong interests in the natural world and technological innovation made him a skilled scientist. Banneker became the first African American to publish a scientific work. He used his knowledge to write almanacs—annual books that have information about weather, tides, and planting. In his almanacs, Banneker also shared his abolitionist views including correspondence he boldly wrote to Thomas Jefferson to point out a chilling contradiction: the same person who declared that all men were created equal, enslaved people himself. Banneker asked Jefferson to respect his "natural nobility" against Africans. Banneker also was known

CELEBRATING MARYLAND DAY

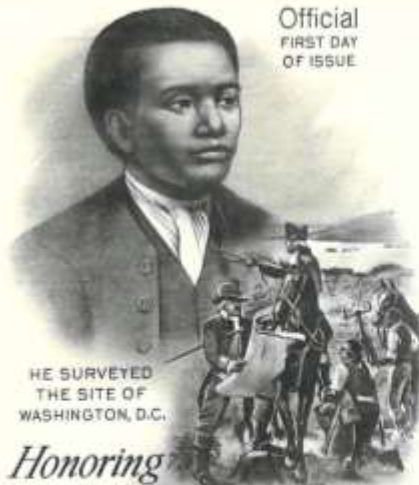

Baltimore County's Benjamin Banneker – Surveyor of Washington DC

"Presumption should never make us neglect that which appears easy to us, nor despair make us lose courage at the sight of difficulties."

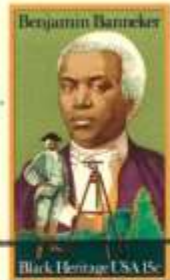

Benjamin Banneker was born a free man in Maryland – he was an astronomer, mathematician, naturalist, farmer, inventor, surveyor, abolitionist, and an almanac author

HE SURVEYED THE SITE OF WASHINGTON, D.C.

The Sesquicentennial of the Coast and Geodetic Survey

FIRST DAY OF ISSUE

THE COAST AND GEODETIC SURVEY had its beginning in February, 1807, when President Thomas Jefferson was authorized by Congress to establish an agency for surveying and charting the coastal regions of the United States. It was the first technical bureau in the Federal Government, and has been serving the Nation for the past 150 years by providing accurate, marine charts and related technical information on tides and currents, geodetic control, and geophysics. More recently it has been providing aeronautical charts for the United States and possessions. Originally under the Treasury Department, and later a part of the Navy Department, it has been a bureau in the Department of Commerce since early in this century.

TWO MORE SRI LANKA SURVEYOR STAMPS 1986 AND 1987.

Pitcairn Islands Space Issue

This stamp issue commemorates the joint venture between the Governments of Great Britain and the United States of America in the mid 1960's. This top secret mission was to investigate the feasibility of building an airstrip on Henderson Island, part of the Pitcairn group in the South East Pacific.

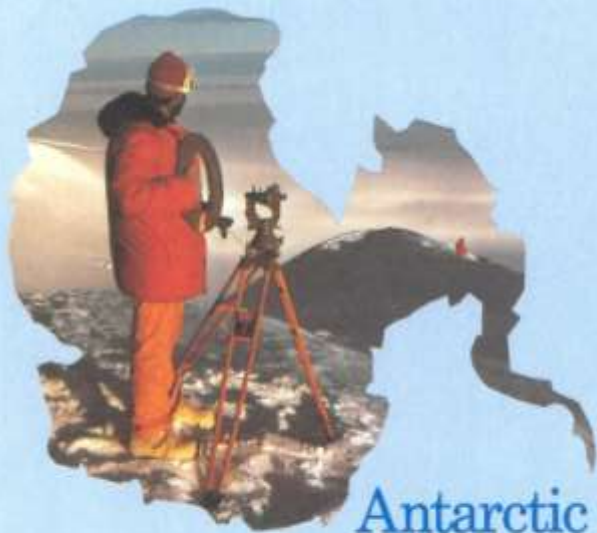

Henderson was identified as a potential base to facilitate 'Polar Orbit' satellite recovery from the California launch site of Vandenberg Air Force Base.

This mission was conducted in 1966, and consisted of the uninhabited Henderson Island being surveyed by personnel of the United States Air Force with assistance from the satellite recovery vessel USNS Sunnyvale. The plan was submitted recommending the airstrip proceed but failed to gain support at higher levels and the project was abandoned.

In 1988 Henderson Island was declared a World Heritage Site. Today it is visited by just a few small cruise vessels and yachts and the Pitcairners still visit occasionally to collect Miro wood to carve as souvenirs for tourists.

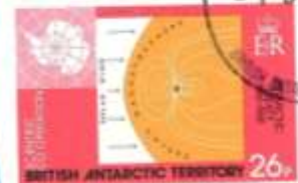

2000 STAMP ISSUE BY PITCAIRN ISLANDS COMMEMORATING THE JOINT SATELLITE RECOVERY SURVEY MISSION CARRIED OUT WITH THE USA SHOWING THE SURVEYOR MEASURING FOR A PROPOSED AIRSTRIP ON HENDERSON ISLAND.
