

# Practical Impacts of the Modernized NSRS

**Dru Smith (USA)**

**Key words:** GNSS/GPS, Implementation of Plans, Legislation, Positioning, Professional practice, Reference frames, Reference systems

## **SUMMARY**

In 2025 the National Geodetic Survey (NGS) will release the modernized National Spatial Reference System (NSRS), replacing all current reference frames and datums in use in the United States. In preparation, NGS has been working closely with geospatial software and hardware vendors to prepare for the transition. This talk will highlight some of the practical impacts of the modernized NSRS and some of the tools which NGS and industry partners will be providing to surveyors and other geospatial professionals to make the transition to the new system.
